

Objective

Engineering student looking for a challenging part time job over the summer that I can learn important industry skills from. I have taught myself web development related coding languages such as java-script and I have learnt languages such as python while studying data science and engineering at the University of Auckland. Im really interested in front end development as I enjoy designing things but I am also capable of back end development with my data science background and would enjoy learning the ropes in either field.

Personality

- ✓ Communicative
- ✓ Punctual
- ✓ Creative
- ✓ Organized

Hobbies

Qualifications

- 🚗 - Restricted car license
- 🏍️ - Learner motorbike license

Mount Roskill Grammar School
- NCEA levels 1 - 3 merit endorsed
- Prefect

**2010
-
2015**

University of Auckland
- Studying a conjoint degree
consisting of data science and
engineering

**2016
-
present**

Software Skills

**I enjoy learning new code
and have taught myself...**

HTML

CSS

Java-script

...HTML, CSS and Javascript. The reason I did this was because I was interested in app development but my friends told me that a good starting point would be to first learn website development. So far I have re-made websites i've come across that I felt looked outdated and one of these can be seen on my github. I've really enjoyed learning how to make responsive websites as I found it cool to be able to switch between a computer or phone and still experience the same thing.

**I have also learnt code while
studying...**

Python

Matlab

C

...Such as Python, Matlab and C. I have learnt python quite extensively in my first year as a data science student and have learnt how to implement recursive data types such as linked lists and trees. Matlab and C are languages I am currently learning in my first year as an engineering student and my skills in these are quite basic as I haven't made anything complex using them.

Experience

2013 - 2015 • McDonalds

I worked at McDonalds WESTGATE during high school (Nov, 2013 - Nov, 2015) where I worked under a professional management team for 2 years. Working here has taught me hospitality skills where I have had to communicate with customers politely and calmly and has also taught me how to handle money in a store as I have had to handle money whilst manning a cash register.

2016 • Auckland Bone Density

I had worked at Auckland Bone Density part-time for a week (8th - 15th July 2016). I had taken calls to book bone density appointments, type bone density letters that are sent to patients, and send recall letters to patients as well. Working here has taught me how to talk to customers/ patients on the phone and I had to also deal with confidential letters which demonstrates my trustworthiness as an employee.

2016 - 2017 • Noel Leeming

My last job was at Noel Leeming, New Lynn, during the 2016 holiday season (Dec, 2016 - Jan, 2017). My role was to help with stock which mean scanning barcodes of new stocks and logging them into their system and when it became busy I was also required to help customers on the floor. This job taught me about how stock works behind the scenes of a major company and also improved my customer interaction skills.

Achievements

Mount Roskill Grammar School

- Sheppard house peer support leader
- Prefect
- Academic mentor

Air training corps (03 SQN)

- Completed three years
- Rank LAC (leading air cadet)
